

## Dermal Fillers

Carefully placed dermal fillers are most commonly used to give a more youthful and refreshed look by softening lines and folds and replacing the volume lost during the natural process of ageing.

### WHY CHOOSE TO HAVE DERMAL FILLERS?

As we get older our skin starts to lose its natural moisture (hyaluronic acid) and the levels of collagen and elastin in the skin start to decline. This means that our skin quality is affected, it becomes dry, decreases in volume and lines and wrinkles start to appear. These signs of ageing are most commonly noticed first around the cheeks and chin. The levels of subcutaneous fat in the face starts to decline, the bones in the skull start to reabsorb and become thinner, meaning that the skin starts to hang and sag. Imagine a cushion getting older, as the stuffing gets flatter the cover isn't as tight as it used to be. This is what happens to the skin. The shape of the face changes from the "triangle of youth" to a rectangular, heavy shaped jaw.

This is where dermal filler plays a huge part in helping to restore the lost volume in the face. The most commonly used dermal fillers are made from hyaluronic acid and can be injected into the different layers of the face, creating subtle, smooth natural results. Carefully placed injections add volume to beauty points or replace volume where it has been lost.

Areas that can be treated include the cheeks, chin, jawline, under the eyes, nose to mouth lines, mouth to chin and above the lip. A thorough consultation will be carried out and a treatment plan made to achieve your goals.

#### Treatment Overview

-  **Procedure Time**  
30 - 60 Minutes
-  **Discomfort Level**  
Minimal
-  **Anaesthetic**  
Topical Numbing Cream, filler also contains Lidocaine.
-  **Recovery Time**  
1-2 Hours
-  **Duration of results**  
6-18 Months, product dependant
-  **Final Results**  
2 Weeks

#### Pricing

Cheeks, Chin & Jaw Prices from **£300**  
(Price on Consultation)
