

Non - Surgical Rhinoplasty

Are you unhappy with the profile of your nose? Some people, both men and women can feel unhappy about the shape of their nose. Non-Surgical Rhinoplasty is a non-invasive treatment, that can correct the nose using long lasting dermal fillers without the need for costly surgery.

Small amounts of carefully placed dermal fillers can be used to improve the look of a variety of noses. The most frequent problem that people seek treatment for is the dorsal bump; this is the classic bump on the bridge of the nose that can give it a hook like appearance. It is also possible to lift the tip of the nose, by injecting the base of the tip with filler, the nose is given more support and the droop in the tip is lessened.

WHAT ARE THE BENEFITS?

The beauty of a non-surgical rhinoplasty is that the results are immediate and unlike a surgical rhinoplasty it is less invasive; there is very little downtime, less risk of complications, it isn't permanent and it's a fraction of the cost.
